Mr. Boyd Hamilton  
Program Manager  
Hazardous Waste Section  
Hazardous Waste Bureau  
Environmental Improvement Division  
1190 St. Francis Drive  
Santa Fe, New Mexico 87503

Dear Mr. Hamilton:

As discussed at our December 14, 1989, meeting held with General Electric (GE), ground water analyses on samples collected by GE will consist of the entire Appendix IX list.

The analyses to be performed by the Environmental Protection Agency (EPA) are to consist of TCL organics and metals. Ground water samples will be collected by EPA from the background well and either M-2 or M-4.

The indicator compound analyses will be performed on shallow borings and borings peripheral to the dry well. Analyses for the chlorobenzenes will not be performed on the shallow borings.

Please call me should you have any questions! Thanks for your help.

Sincerely,

Kathleen O'Reilly  
Geologist  
Technical Section (6H-CX)  
RCRA Enforcement Branch
