Santa Fe NM 87505

Enclosed are recently completed Relative Risk Evaluation Worksheets on 15 sites, which were investigated under the Appendix III RCRA Facility Investigation (RFI) and determined to require additional investigation to fully characterize the presence of contaminants. Also enclosed are worksheets on the Great Reusable Air Blast Simulator (GRABS) site and Former Pistol Range, which were investigated as potential SWMUs in June 1995. The EPA has designated the Former Pistol Range a SWMU and it will be identified as IRP OT-74. The data used to make the Relative Risk Evaluation for the GRABS site and the Former Pistol Range are contained in SWMU Assessment Reports, which were submitted to the EPA July 1995. Data used to evaluate the remaining sites are contained in the Appendix III RFI Reports for Wasteline and Non-Wasteline Sites.

KAFB Environmental Management would appreciate your input on these site evaluations. Please review the worksheets for content and rating. If you have any comments or suggestions, please submit them by 15 February 1996 so that we can incorporate them into the worksheet prior to submitting them to higher headquarters.

Your interest in this matter is appreciated. Please contact me at 846-9004 if you need additional information or would like to discuss this further.

Respectfully

JERROLL G. SILLERUD  
Environmental Engineer  
Environmental Management Division
