Baird

We are requesting an extension of time to submit the semi-annual report for ST-106, due to our workload and limited personnel. The report is due 30 Nov 07, we are requesting an extension of time to submit the report until 31 Dec 07. Do we need to submit a formal request, or can we process this through you as we have in the past?

We reached the groundwater at KAFB-1067 (adjacent to the jet fuel AST), yesterday evening. We tagged the water this morning and there is no PSH present; apparently we have a bounding point. Should we continue with the original plan of locating the next well halfway between KAFB-1066 (the first location of this drilling phase where we encountered an inch of PSH) and KAFB-1065? Also, we will be completing KAFB-1067 today and tomorrow and need to resolve the wellhead completion methodology; have you had a chance to review our proposal?

We have come up with an interesting theory concerning the presence of acetone in the subsurface at ST-106, something you may already be aware of. Please call sometime to discuss.

Thanks
