Baird

As we discussed this afternoon, we are planning our FY10 program for the Bulk Fuels Facility, which will continue to implement the approved Stage 2 Abatement Plan Modification. We anticipate completion of the investigation during FY09 and initiation of the Stage 2 Abatement plan requirements as outlined in 20.6.2 NMAC 4106.D. in FY10. Because of the magnitude and expense of this project, the fact that the contamination is off of KAFB, which may require implementation of off-base abatement, and the need for public input and approval for our abatement option, we are proposing that the requirements of 4106.D. be completed in a phased approach. For FY10, we are proposing to complete our site conceptual model (4106.D.(1)) and assessment and selection of the preferred abatement option (4106.D.(2) and (3)). We would begin design (cited within 4106.D.(3)) and implementation the preferred abatement option in FY11. This approach is in line with our approved Stage 2 Abatement Plan Modification, which provided a step by step approach to investigation and abatement of the site.

We are requesting your review and approval of our proposed phased approach to completion of the Stage 2 Abatement Plan Modification.

Thanks
