**Subject:** new SVE unit

All

I spoke with Sharon this morning , the new SVE unit is on the road today and should be arriving at the end of this week. Initially the unit will be stored within the fuels facility compound, while preparations are completed for installation. Because the unit will be installed at monitor well KAFB-1068, which is located outside of the fuels facility fencing, we will install fencing around the KAFB-1068 well location for security. Additionally, a propane tank will be required, which will require a subsurface connection to the SVE unit, which involves processing of a digging permit. Installation is therefore anticipated for next week with initial startup by the manufacturer, as completed for the unit at KAFB-1065.

More as it develops.

Thanks
