

DEPARTMENT OF THE AIR FORCE
377TH AIR BASE WING (AFGSC)

24 May 2023

Colonel Jason F. Vattioni, USAF
Commander
377th Air Base Wing
2000 Wyoming Blvd SE
Kirtland Air Force Base NM 87117

Mr. Ricardo Maestas,
Hazardous Waste Bureau (HWB) Acting Chief
New Mexico Environment Department (NMED)
2905 Rodeo Park Drive East Building 1
Santa Fe NM 87505-6303

Dear Mr. Maestas

Kirtland Air Force Base (KAB) acknowledges receipt of the New Mexico Environmental Department (NMED) Hazardous Waste Bureau letter dated 01 March 2023, Approval with Modifications of Kirtland AFB Workplan for WYO-4 Area of Concern RCRA Facility Investigation, Revision 2 (Workplan), submitted 28 September 2020. KAFB understands a revised submittal is not required and acknowledges the stated modification.

The contract period of performance on the current contract for performing this work at WYO-4 has expired since submittal of the Workplan. KAFB is currently preparing a new contract to be awarded in September 2023, under which the continuing work at WYO-4 is included. As a result, KAFB respectfully requests an extension until 30 April 2024 for submittal of the well completion report to allow time to award the new contract, complete subcontracting, arrange dig permits and New Mexico Office of State Engineer Well Permits, and install the three new wells. The groundwater sampling plan would be submitted for review in June of 2024.

If you have any questions or concerns, please contact Mr. Scott Clark at (505) 385-3679 or scott.clark@us.af.mil or Mr. Darren Knight at (661) 203-7714 or john.knight.15@us.af.mil.

Sincerely

**RE: APPROVAL WITH MODIFICATIONS
WORK PLAN FOR WYO-4 AREA OF CONCERN RCRA FACILITY INVESTIGATION,
REVISION 2, SEPTEMBER 2020
KIRTLAND AIR FORCE BASE, NEW MEXICO
EPA ID# NM9570024423
HWB-KAFB-19-013**

Dear Colonel Vattioni and Ms. Clark,

The New Mexico Environment Department (NMED) received the U.S. Air Force (Permittee) Kirtland Air Force Base (Facility) Work Plan for WYO-4 Area of Concern RCRA Facility Investigation, Revision 2, September 2020 (Work Plan) on September 28, 2020. NMED has reviewed the Work Plan and hereby issues this Approval with the following modification:

1. Executive Summary

Permittee Statement: "The proposed investigation consists of installing three groundwater monitoring wells completed in the perched zone near well WYO-4. Three locations and one contingency location are proposed for the wells."

NMED Comment: Similar statements are also made in Sections 4.1 (Monitor Well Installation and Sampling) and 5.2 (Proposed Groundwater and Soil Vapor Monitoring Well Locations and Construction); however, the language following these statements results in ambiguity due to the potential for differing outcomes. For example, in the Executive Summary, after the above quoted text, the Permittee states:

"One well (Location 1, designated as KAFB-WYO-5) will be drilled 50 feet northwest and upgradient of WYO-4 and completed as a groundwater monitoring well screened in the perched groundwater zone and equipped with annular probes to allow collection of soil vapor samples for analyses of volatile organic compounds (VOCs). This location will be screened at the bottom of the perched zone and located in the vicinity of WYO-4. Downgradient groundwater monitoring wells will also be completed in the

Page 2

perched groundwater zone for collection of groundwater samples only and will not be constructed with annular probes. The second well (KAFB-WYO-6) will be installed 250 feet downgradient from WYO-4. If water is not present in the perched zone of the second well, the alternate location will be used for the third well (KAFB-WYO-7) 250 feet downgradient of WYO-4 and completed as a perched groundwater monitoring well. If well KAFB-WYO-6 or KAFB-WYO-7 do not find perched groundwater, an alternate well (KAFB-WYO-7[alt]) will be drilled approximately 800 feet southeast and downgradient of WYO-4."

The discussion seems incomplete because it does not state what happens if water is found to be present in KAFB-WYO-6 or KAFB-WYO-7. To clarify, NMED requires that a minimum of three wells be installed for this investigation and concurs with installation of the alternate well should water not be present in either KAFB-WYO-6 or KAFB-WYO-7. No revision is required.

Following installation of the wells, the Permittee must submit a well installation report detailing the installation, findings, and initial sampling results no later than **June 2, 2023**. In addition, the Permittee must submit a groundwater monitoring plan for review no later than **August 1, 2023**. The report and work plan must comply with the KAFB Permit and NMED's *General Reporting Guidelines for Corrective Action Documents*, which can be found at <https://www-archive.env.nm.gov/hazardous-waste/guidance-documents/>.

This approval is based on the information presented in the document as it relates to the objectives of the work identified by NMED at the time of review. Approval of this document does not constitute agreement with all information or every statement presented in the document.

If you have any questions regarding this letter, please contact Cristina Eads at (505) 490-5808.

Sincerely,

Dave Cobrain
