

PNM Person Station

Feb 10, 1984

Boyd Hamilton informed me that since PNM in their letter of January 20, 1984 <sup>(received 1/23/84)</sup> requested comments on Phase III of their study by January 29, 1984, and since he had asked Dave Boyer for comments by that date and had not received any, hazardous waste section had informed PNM by telephone 1/30/84 that there were no comments. PNM had requested comments by that date so that they could proceed on schedule with Phase III.

Devon Jerceinovic informed me that when she briefly visited PNM Person Station on Wednesday 1/8/84, ~~one of the~~ monitor wells one and two were in place and drilling was starting on the third one. Monitor well one had already been developed. It appeared that they were installing the wells just as proposed taking proper cleaning precautions.
