

Telephone     Personal    Time *noonish*    Date *3/1/84*

Originating Party	Other Parties
<i>Lody Plum, PNM (ABQ) 848-2216</i>	<i>Paige Grant, Devon Gersinovic, Rick Meyerheim (SCD)</i>

Subject *results of soil samples from Person Station*

Discussion *Plum said they had received the results from the California lab but not from SCD. I checked with Devon; Devon directed me to Rick M. at SCD; Rick M. put me on to Jim Ashby, who gave me the following information:  
No quantitative analysis had been done on any of the samples yet, nor have they run tests for PNA + PCBs yet.*

- At 25 feet below ground surface: trichloroethene and high in aliphatics - "smelly sample"*
- 40' below ground surface: < 10 ppb 1,4-dioxane and < 1 ppb trichloroethene*
- 55' below surface: hexane, possible trace of 1,2-dichloroethane*
- 90' below surface: nothing*
- discharge pipes underneath road, well #1: nothing.*

~~Distribution~~ *Calags - collected from outside faucet well approx. 150 ft: < 5 ppb aliphatics + (this last sample may be unrelated to PNM)*

Signed *Paige Grant*

OVER →

I relayed the information to Gode  
Plum.

PNM meeting, not Friday →
