GROUND WATER/HAZARDOUS WASTE
BUREAU

Mr. Anthony Drypolcher
Acting Bureau Chief
Groundwater/Hazardous Waste Bureau
New Mexico Environmental Improvement
Division
Post Office Box 968
Santa Fe, NM 87504-0968

Dear Mr. Drypolcher:

Subject: Public Service Company of
New Mexico Person Generating
Station

Enclosed are the results of PNM's groundwater investigations at Person Generating Station. A considerable amount of data were collected and analyzed. Replicate samples were analyzed at separate laboratory facilities. Groundwater samples were also split with NMEID staff April 10 and 11, 1984. Although we have not received a written report from NMEID, verbal information received from David Boyer May 24, 1984, leads PNM to believe that comparable results were obtained by the New Mexico State Laboratory.

PNM is continuing its investigation of feasible cleanup technology which might remedy both soil and water contamination, but to date has made no plans to begin such work, nor have we determined what level of mitigation is appropriate. This decision is based upon PNM's belief that movement of the spilled material through the soil is not now occurring and that the effects of the spill are very localized.

We look forward to discussing this report with you and members of your staff. However, should you have any immediate questions, please contact me.

Very truly yours,

Richard A. Jordan, Manager
Regulatory Licensing & Compliance
