

# MEMORANDUM

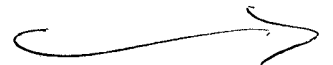

DATE: 7/5/84

TO: file

FROM: Larry Grant

SUBJECT: reference to PNM Person Station  
hazardous waste injection well  
(see 3x5 card, attached)

I found the attached card approximately mid-May of this year while going through some old files and notes of Randy Hicks related to the UIC Inventory. It seemed significant to me that the well was known about in 1981, so I passed the card to Dave Boyer, who was coordinating the technical response of EIS to the first submittal by PNM delineating the extent of contamination by the well. Boyer subsequently passed the card to Joel Hubbell, who asked me to explain the circumstances

under which it came to light.  
This is all I know about the  
card.
