

MEMORANDUM

TO: Baird Swanson
Ground Water Quality Bureau

FROM: Carl Wilk 
Hazardous & Radioactive Materials Bureau

DATE: November 1, 1996

SUBJECT: PNM Person Generating Station Site Documents

Enclosed are copies of a 9/9/96 letter from PNM and a 12/95 Parsons Engineering report titled "Source and Release Assessment for the Deep Aquifer" regarding the above-referenced site, as we discussed on the phone today. The November 12 meeting will be on the proposals in the September letter. Representatives from Parsons will be at the meeting and will write up an agenda ahead of time. I'll send you a copy when I receive one.

Richard Ohrbom suggested that I send a memo to Dale Doremus informing her that there is groundwater contamination here and that a decision is being made on how to respond to it. I hope to get that out today.

Thanks for your help. Let me know if you have any questions or need more information.
