CERTIFICATION OF CLOSURE

New Drum Storage Area
Sparton Technology, Inc.
Coors Road Plant
Albuquerque, New Mexico

On October 15, 1986, Gary Richardson, a New Mexico Registered Professional Engineer, acting as a subcontractor to Harding Lawson Associates, inspected the New Drum Storage Area at the Sparton Technology, Inc. Coors Road facility. This area has been used as a storage facility for hazardous waste in drums.

The area was clean and orderly, and there was no visible evidence of residual hazardous wastes or hazardous waste constituents. Furthermore, there was no visible evidence that any hazardous waste or hazardous waste constituents had escaped the storage facility. All containers of hazardous waste had been removed from the facility.

According to Mr. Cleoves Martinez, the facility Environmental Engineer, the hazardous waste removed from the storage area was disposed at a permitted commercial hazardous waste facility.

Based on the above information, it is the professional opinion of the undersigned that the New Drum Storage Area was closed in general accordance with the Closure Plan dated December 19, 1985, as subsequently modified by the New Mexico Environmental Improvement Division in a letter addressed to Sparton Technology, Inc. dated March 21, 1986.
