Re: Western Refining Southwest LLC D/B/A Marathon Gallup Refinery
40 CFR 63 Subpart GGGGG: National Emission Standards for Hazardous Air Pollutants:
Site Remediation (Site Remediation MACT) –Initial Notification

Dear Sir or Madam:

Pursuant to 40 CFR Part 63.9(b), Western Refining Southwest LLC is providing an Initial Notification that the Marathon Gallup Refinery may be subject to the applicable provisions of the Site Remediation MACT (40 CFR Part 63, Subpart GGGGG). The U.S. Environmental Protection Agency finalized revisions to the Site Remediation MACT on December 22, 2022, removing previous exemptions. Based on this final rulemaking revising the Site Remediation MACT to remove previous exemptions, the Marathon Gallup Refinery is providing the following Initial Notification.

Initial Notification (40 CFR 63.9(b)(2))

Name and address of the owner or operator (40 CFR 63.9(b)(2)(i)):

Western Refining Southwest LLC
92 Giant Crossing
Gallup NM, 87301

Address (i.e., physical location) of the affected source (40 CFR 63.9(b)(2)(i)):

Marathon Gallup Refinery
1-40, Exit 39
Jamestown, NM 87347

Western Refining Southwest LLC

A subsidiary of Marathon Petroleum Corporation

I-40 Exit 39
Jamestown, NM 87347

Identification of the relevant standard (40 CFR 63.9(b)(2)(iii)):

40 CFR 63 Subpart GGGGG: National Emission Standards for Hazardous Air Pollutants: Site Remediation

Brief description of the nature, size, design, and method of operation of the source (40 CFR 63.9(b)(2)(iv)):

The Refinery is subject to a New Mexico Oil Conservation Division (OCD) Groundwater Discharge Permit (GW-032) that requires remediation of groundwater at the facility. Groundwater remediation currently includes a single pump and treat system with thirteen pumping wells with treatment of the groundwater in the refinery's permitted wastewater treatment unit. Additional remediation of soil and groundwater may be added in the future if deemed necessary by the New Mexico Environment Department (NMED).

An identification of the types of emission points within the affected source subject to the relevant standard (40 CFR 63.9(b)(2)(iv)):

The current emission points at the Refinery include remediation material management units (such as storage tanks, oil/water separators, and transfer systems), process vents (such as open-ended piping, stacks, or ducts to atmosphere), equipment leaks (such as pumps, valves, and connectors), and/or pressure relief devices, as those terms are defined in 40 CFR 63.7957.

Types of hazardous air pollutants emitted (40 CFR 63.9(b)(2)(iv)):

The types and quantities of Hazardous Air Pollutants (HAPs) regulated by Subpart GGGGG (i.e. Table 1 HAPs) vary depending on the material affecting the groundwater under remediation. Typical refinery HAPs, such as benzene, toluene, hexane, and naphthalene, are possible HAPs that could be present at site remediation locations.

A statement of whether the affected source is a major source or an area source (40 CFR 63.9(b)(2)(v)):

The NMED has classified the Marathon Gallup Refinery as a major source of HAP emissions in the facility's Title V operating permit P021-R4.
